

## Digital Honesty Box

The KiwiCamp Digital Honesty Box revolves around online bookings and our KiwiCamp PODS.

A guest can create a booking online and then check in once they are on site or a booking is created when someone swipes in directly.

Payment is taken and site availability updated automatically. A guest will be emailed their booking confirmation.

Site occupancy is displayed on the KiwiCash operator dashboard which can enable rangers/site staff to monitor payment identifying users via their vehicle registration.

Any guests can be contacted by email, cell phone or push notification. Accurate site records are kept and can be downloaded in Excel or PDF file. Data can be searched by age, gender, nationality etc.

## The KiwiCamp PODS

These PODS lie at the heart of the KiwiCamp system and require 12v power and internet connectivity to operate. The pods are specifically engineered to be low powered and low data usage. This means that they can operate in almost any situation. We will advise you exactly what will be required depending on your connectivity options, power and shelter. Confirmation

## Power

The PODS can be retrofitted into any existing 240 volt supply (lights) simply by adding a 12 volt converter. Solar is the next best alternative, but setup will depend on the location.

## Connectivity

There are many options to enable connectivity of our devices to the internet. Our PODS require a WiFi signal that can be created by a nearby router or cell network hotspot. Once again, this connectivity is very dependent on site specifics but can be achieved nearly anywhere.

## Location/Housing

The housing set up is also very dependent on location. The Digital Honesty box can be placed inside a shelter or be a free standing set up as shown in the two images supplied.

While face can be altered to have different logos and information, Information on how to use the KiwiCash system and nearest key retailer is a must.
